**Agro-met Advisory**

There will be normal weather condition from 13th to 17th February, 2019. Wind velocity range from 5 to 7 Kmph from 13th to 17th February, 2019.

---

**Crop**  
**Stage**  
**Agro Advise**

- **Groundnut**  
  Flowering  
  - Due to increasing rate of evaporation irrigate the groundnut crop at an interval of 8-10 days after sowing. Rolling of empty drum 45-60 days after sowing for better penetration of pegs & pod setting is advocated.

- **Pulse crop**  
  Pod stage  
  - Harvest mature pulse crop early in morning or late in evening and dry it for 3 to 4 days in sunlight. Stored dried grain in proper manner.

- **Mango**  
  Flowering and Fruiting  
  - There is possibility for incidence of hoppers and anthracnose disease on mango tree. Therefore it is advise to spray Thiomethoxam 25%WG @ 1gm for control the incidence of mango hoppers + Hexaconazole 5% @ 5 ml or wettable Sulphur 80% @ 20 gm for control of powdery mildew + Carbendazim 12% +Mancozeb 63% @ 10 gm for control of anthracnose disease per 10 liter of water.
  - Due to forecast for increase in maximum temperature, there is possibility for pre-mature fruit drops of mango, therefore it is advise to spray 2% urea (200 gm per 10 liter of water) by mixing into insecticide solution of 4th to 6th spray blossom protection schedule of mango. or spray mango tree with 1% potassium nitrate solution (1 kg KNO3 per 100 liter of water) Care should be taken to add completely dissolved solution of urea in insecticide.
  - Apply 150 to 200 liter of water per tree after fruit setting in mango at an 15 days interval for 3 to 4 times to avoid the pre-mature fruit drop.
  - The pre harvest bagging with News paper bag at marble stage increases the fruit weight, pulp weight, produce spongy tissue free fruit, controls incidence of mealy bag on fruits and produces spotless fruits of mango.

- **Cashewnut**  
  Fruiting  
  - There is possibility of incidence of tea mosquito bug and thrips during fruit bearing stage of cashewnut, if incidence is noticed spray Lambda cyhalothrin 5%EC @ 6 ml per 10 liter of water. (insecticide is not under label claim)
  - Provide irrigation to newly planted cashewnut orchard and use straw mulch to reduce evaporation.
  - Provide support to newly planted cashew nut grafted, as there is forecast of high wind speed.

- **Coconut**  
  - For above five year old coconut palm apply 3rd dose of 750 gm urea and 667 gm muriate of potash in circular basin of 1.5 to 1.8 meter from the base of palm, incorporate in soil and irrigate.

- **Arecanut**  
  - Provide irrigation to arecanut orchard at 7-8 days interval.

- **Spice crop**  
  Harvesting  
  - Carry out harvesting of black paper by picking the whole spikes by hand, when few berries in the spike start turning yellow or red. The berries are separated and dipped in hot water (80°C) for one minute and sun dried for 3 to 4 days.

- **Vegetables/ Fruit crop nursery**  
  Fruiting  
  - Follow earthing up operation in Okra, Brinjal, Tomato, Chilli etc. vegetable crops. Also provide support to crop as there is forecast of high wind speed.
  - Carryout harvesting of the vegetable those are in proper stage of harvesting.
  - Provide irrigation to fruit crop nursery, vegetable crops.

- **Milch animal /goat/poultry**  
  - Provide clean and hygienic drinking water to farm animals.
  - Medication against ticks in farm animal under the guidance of veterinary officer is advocated.

---

This Agro Advisory Bulletin (AAB) is prepared and published with the consultation and recommendation of SMS committees of “Gramin Krishi Mausam Sewa (GKMS)” Dr. Balasaheb Sawant Konkan Krishi Vidyapeeth, Dapoli.
